# HAND SANDING SOLUTIONS

COMPLETE HAND SANDING SOLUTIONS  
FOR PROFESSIONAL WOODWORKERS  
AND CABINET MAKERS

# A PERFECT CABINET NEEDS A PERFECT SANDING JOB

Hand sanding is the final and most critical step of the whole sanding process. The quality of your finished product will always depend on the quality of the sanded surface before painting or staining. Here at Uneeda, we removed all the guesswork and confusion around hand sanding to provide you with simple yet highly efficient sanding solutions so you can optimize your sanding process and get the results you deserve.

ONE

## EKASAND SANDERS

Using the right tools can mean a world of difference in the quality and speed of the final sanded product. Our EKASAND E-Series random orbital electric sanders feature a brushless motor for longer lifetime and an ergonomic design to reduce hand fatigue. For those already set up with an air compressor, our pneumatic sanders deliver the perfect combination of power and agility for a smooth sanded surface.

## EKASTORM

Thanks to its thicker C-weight backing, Ekastorm not only excels at removing material at a higher rate but is also designed to minimize clogging to offer a prolonged lifetime. The versatility and competitive pricing of Ekastorm make it a must have in every shop.

TWO

THREE

## FILMTEK

Film is known to be generally superior to paper as it allows for a more uniform and consistent finish. It provides better flexibility and durability, and is tear resistant offering a two, to sometimes three times longer lifespan than paper. We recommend using Filmtek in your finishing process (grits 150 or higher) for optimal results.

## EKASILK PLUS

Eliminate hand sanding in between coats of paints and stain. EKASILK PLUS is the answer to the most common finish sanding problems: from sharp edges, contours, and tight, hard to reach spaces to fast loading, torn or broken abrasives, or simple fatigue from manual sanding. Attach this unique abrasive sponge on your sander and cut your sanding time by half.

FIVE

## UNEESPONGES

Available in 3/16in., 1/2in. and 1in. thickness, Uneeda's Uneesponges are the most versatile abrasives for hand finishing any type of wood, metal and fiberglass. They can be used to remove raised fibers on whitewood or sanding stain and sealer. Because of their extreme flexibility, they are excellent for sanding intricate profiles, edges and contours.

But don't take our word for it! Take our products for a test drive and see how Uneeda can improve your sanding process. Give us a call at 800-431-2494 or email us at [sales@uneeda.com](mailto:sales@uneeda.com) and speak to one of our sales technicians.
